PROFILE

Systems Engineering student at UTN FRBA with experience in process automation, system integration, and technical documentation. I have worked with n8n, Bitrix24, PostgreSQL/Supabase, and REST APIs to resolve real operational workflows, handle deduplication, design fallbacks, and manually validate workflows. I am interested in the intersection of data, processes, and tools that reduce manual work and improve traceability.

RELEVANT EXPERIENCE

Automation Project for Goupers — Real Project

2025

- Development of a workflow for processing reservations received by email.
- Integration between n8n, Bitrix24 and PostgreSQL/Supabase.
- Implementation of deduplication and data validation.
- Design of operational fallbacks for matching errors.
- Manual testing of webhooks and HTTP requests with ReqBin.
- Technical documentation of architecture, limitations, and design decisions.

Technologies: n8n, Bitrix24, PostgreSQL, Supabase, JavaScript, REST APIs, Webhooks.

FormulaFacil UTN — Educational Web Project

2026

- Development of a web application for practicing math formulas during university admission.
- Modular architecture in vanilla JavaScript.
- Formula rendering with MathJax.
- Responsive interface and local persistence of settings.
- Over 2,000 registered users.
- Public project with iterative evolution.

Technologies: JavaScript, HTML, CSS, MathJax.
